CLAIMS

1. A method for presenting at least a part of an object, comprising:

 - at least partially dividing at least one object into a plurality of sub-objects;

 - presenting said plurality of sub-objects in a first representation,

 - making at least one sub-object of said plurality of sub-objects an active sub-object; and

 - in response to a user operation on said at least one active sub-object, presenting at least one of said at least one active sub-objects in a second representation.

2. The method according to claim 1, wherein said at least one object and said sub-objects are 3D-objects.

3. The method according to claim 1, wherein said at least one object is a page, and wherein said sub-objects are areas.

4. The method according to claim 1, wherein in said user operation, at least one of said at least one active sub-objects is selected, and wherein at least said selected sub-object is presented in said second representation.

5.   The method according to claim 1, wherein at least
     two sub-objects of said plurality of sub-objects are
     made active sub-objects.

6.   The method according to claim 1, wherein said at
     least partial division of said at least one object
     into said plurality of sub-objects is based on a
     structure of at least a part of said at least one
     object.

7.   The method according to claim 1, wherein said at
     least partial division of said at least one object
     into said plurality of sub-objects is based on a
     sectioning algorithm.

8.   The method according to claim 1, wherein in said
     first representation, at least one sub-object of
     said plurality of sub-objects is scaled to a size
     that is smaller than the original presentation size
     of said respective sub-object.

9.   The method according to claim 1, wherein in said
     first representation, at least one sub-object of
     said plurality of sub-objects is cropped.

10. The method according to claim 1, wherein in said
     first representation, at least one sub-object of
     said plurality of sub-objects is indicated by an
     icon.

11. The method according to claim 1, wherein sub-objects
     of said plurality of sub-objects with a size that is

56

above a size threshold, or that contain an amount of
information that is above an information threshold
are made active sub-objects, or both.

12. The method according to claim 1, wherein at least
one of said at least one active sub-objects is
automatically focused, or selected according to a
selection criterion, or both.

13. The method according to claim 1, wherein in said
second representation, said at least one active sub-
object is scaled to a size that is larger than its
size in said first representation.

14. The method according to claim 1, wherein within at
least one of said sub-objects presented in said
first representation, elements can be directly
selected by a user.

15. The method according to claim 1, wherein said
plurality of sub-objects is composed of different
types of sub-objects, and wherein at least one group
of sub-objects of a second type is associated with
at least one sub-object of a first type.

16. The method according to claim 15, wherein said at
least one active sub-object that is present in said
second representation is said at least one sub-
object of said first type, and wherein in response
to a further user operation on said at least one
sub-object of said first type, said at least one
group of sub-objects of said second type associated

with said at least one sub-object of said first type
is presented.

17.   A computer program with instructions operable to
      cause a processor to perform the method steps of
      claim 1.

18.   A computer program product comprising a computer
      program with instructions operable to cause a
      processor to perform the method steps of claim 1.

19.   A device for presenting at least a part of an
      object, comprising:
-     means for at least partially dividing at least one
      object into a plurality of sub-objects;
-     means for presenting said plurality of sub-objects
      in a first representation;
-     means for making at least one sub-object of said
      plurality of sub-objects an active sub-object; and
-     means for presenting at least one of said at least
      one active sub-objects in a second representation.

20.   The device according to claim 19, wherein said sub-
      objects are presented on a display of a portable
      electronic device.

21.   A system for presenting at least a part of an
      object, comprising:
-     means for at least partially dividing at least one
      object into a plurality of sub-objects;
-     means for presenting said plurality of sub-objects
      in a first representation,

- means for making at least one sub-object of said
  plurality of sub-objects an active sub-object; and
- means for presenting at least one of said at least
  one active sub-objects in a second representation.
